

Casting a wide net with Multi-Asset Credit (MAC)

Conditions have changed. Central banks and governments have released tremendous amounts of market support in response to Covid and this in turn impacts asset prices. Whilst in the long run assets always find their 'right price', in the medium term we believe opportunities will shift more sharply between different parts of the credit market. Casting a wide net with MAC is one way of responding to what may be a multi-year, stop-start economic recovery – in our view MAC improves the chances of not only accessing opportunities, but also avoiding the less attractive parts of the market.

No amount of government support can fully compensate for the global economic impact of Covid and its aftereffects will be with us for a long time. Even if a vaccine is found in the short term, behaviours and perceptions have changed with significant consequences: working remotely is now a viable option for many (and often preferred), a lot of businesses can operate surprisingly well virtually, buying online is beating bricks and mortar, business travel is much curtailed, international holidays may be fewer and so on. In time, it may even mean rethinking transport systems and the role of cities if the short term trends gather momentum.

For credit investors two things come to mind: one, there will be rising defaults in parts of the market negatively exposed to these changes; two, flexibility may be the key ingredient to future success.

Multi-Asset Credit

Flexible mandates

The previous financial crisis was the catalyst for greater flexibility in credit mandates where, as is the case today, government and central bank support impacted asset prices and the role of navigating a safe path was delegated to investment managers. Multi-asset credit (MAC) grew in popularity and the Covid crisis presents a similar set of circumstances for investors: asset prices impacted (mostly inflated) by central banks; risk free rates near zero or negative.

The added complexity this time is changing behaviours, some irrevocably, which will see, amongst other things, industries that facilitate remote working benefit and close proximity activities suffer.

Static allocations to credit markets can serve investors well when the world is broadly static – they serve investors less well during a transition phase. The same can be said for index tracking credit strategies, particularly as defaults rise.

The reality is nobody knows what the next few years holds, but a flexible approach at least allows the investor/manager to react to change.

Working harder to get returns . . .

In many countries the 10 year government bond yields are lower than inflation expectation, so investors expect to lose in real terms. For liability relative investors this may have less of an impact, though for most investors avoiding loss remains a key objective.

Earning, say, cash +3-6% in credit market today requires investors to buy largely sub-investment grade bonds. That comes with attendant credit (default) risk. In many ways it makes sense for investors to provide greater flexibility where there is greater credit risk. It allows the manager to rotate into and out of opportunities.

MAC – what asset classes to include?

There is a wide spectrum of MAC products out there from ‘narrow MAC’ which includes just a few asset classes to ‘go anywhere MAC’ that does just that. At the current juncture we believe a wide net conveys some advantages. These are both structural and asset class specific and include:

- **Zero weight** - more asset classes provides greater ability to have zero exposure – with plenty of asset classes to choose from, a manager can more easily have zero exposure to parts of the market. This is harder when fewer assets are included.
- **Diversification** - a more diversified MAC exposure is potentially less susceptible to unexpected central bank/government interventions which can have asymmetric impacts on specific asset classes.
- **Convertible bond universe is ‘Covid friendly’** – pharmaceutical companies and tech businesses tend to issue convertible bonds and including this asset class gives the manager the potential ability to access some of the winners arising from the crisis

If you don't know what the future holds, flexibility is a better strategy than hope

Liquid credit Asset Classes

- **Cocos (financial capital bonds)** – this asset class is unique in that, as a bond holder, you may suffer in some way if a bank's capital level falls below a predetermined level. Given the amount of government support for banking institutions – they are largely the conduit of any recovery – we believe there are some great opportunities, on a selective basis, from staying close to parts of the market that directly benefit from central bank support.
- **Developed market investment grade** – within our own flagship strategy we had not purchased any developed market investment grade in 7 years (due to low yields). That changed in late March and April when investors could achieve three or four times the average spread and, although clearly a very sporadic tactical opportunity, the ability to capitalise on unexpected opportunities favours a wide net.

In summary . . .

With risk free rates low for the foreseeable future, in our view yield/return hungry investors will have little choice but to seek out returns from lower credit quality bonds. This comes at a time when unprecedented support has been pumped into markets and Covid restrictions have left some industry sectors beleaguered, some for the long term.

Herein we have argued a wide net is a useful tool, perhaps an essential one. That is not the whole story – the other component is avoiding defaults and credit managers haven't been meaningfully tested since the last financial crisis. And this time it will be different as investors have to factor in government support to a much larger degree.

Whatever awaits us, even more pandemics, as Charles Darwin said, it's not the strongest or most intelligent who survive, it's those who adapt.

This document may be produced and issued by the following entities: In the United Kingdom (UK) by BlueBay Asset Management LLP (BBAM LLP), which is authorised and regulated by the UK Financial Conduct Authority (FCA), registered with the US Securities and Exchange Commission (SEC) and is a member of the National Futures Association (NFA) as authorised by the US Commodity Futures Trading Commission (CFTC). In United States, by BlueBay Asset Management USA LLC which is registered with the SEC and the NFA. In Luxembourg, by BlueBay Funds Management Company S.A. (the ManCo), which is regulated by the Commission de Surveillance du Secteur Financier (CSSF). In Germany and Italy, the ManCo is operating under a branch passport pursuant to the Undertakings for Collective Investment in Transferable Securities Directive (2009/65/EC) and the Alternative Investment Fund Managers Directive (2011/61/EU). In Switzerland, by BlueBay Asset Management AG where the Representative and Paying Agent is BNP Paribas Securities Services, Paris, succursale de Zurich, Selnaustrasse 16, 8002 Zurich, Switzerland. The place of performance is at the registered office of the Representative. The courts of the registered office of the Swiss representative shall have jurisdiction pertaining to claims in connection with the distribution of shares in Switzerland. The Prospectus, the Key Investor Information Documents (KIIDs), the Articles of Incorporation and any other applicable documents required, such as the Annual or Semi-Annual Reports, may be obtained free of charge from the Representative in Switzerland. In Japan, by BlueBay Asset Management International Limited which is registered with the Kanto Local Finance Bureau of Ministry of Finance, Japan. In Australia, BlueBay is exempt from the requirement to hold an Australian financial services license under the Corporations Act in respect of financial services as it is regulated by the FCA under the laws of the UK which differ from Australian laws. In Canada, BBAM LLP is not registered under securities laws and is relying on the international dealer exemption under applicable provincial securities legislation, which permits BBAM LLP to carry out certain specified dealer activities for those Canadian residents that qualify as "a Canadian permitted client", as such term is defined under applicable securities legislation. The BlueBay group entities noted above are collectively referred to as "BlueBay" within this document. The registrations and memberships noted should not be interpreted as an endorsement or approval of BlueBay by the respective licensing or registering authorities. Unless otherwise stated, all data has been sourced by BlueBay. To the best of BlueBay's knowledge and belief this document is true and accurate at the date hereof. BlueBay makes no express or implied warranties or representations with respect to the information contained in this document and hereby expressly disclaim all warranties of accuracy, completeness or fitness for a particular purpose. The document is intended only for "professional clients" and "eligible counterparties" (as defined by the FCA) or in the US by "accredited investors" (as defined in the Securities Act of 1933) or "qualified purchasers" (as defined in the Investment Company Act of 1940) as applicable and should not be relied upon by any other category of customer. This document does not constitute an offer to sell or the solicitation of an offer to purchase any security or investment product in any jurisdiction and is for information purposes only. This document is not available for distribution in any jurisdiction where such distribution would be prohibited and is not aimed at such persons in those jurisdictions. Except where agreed explicitly in writing, BlueBay does not provide investment or other advice and nothing in this document constitutes any advice, nor should be interpreted as such. No BlueBay Fund will be offered, except pursuant and subject to the offering memorandum and subscription materials (the "Offering Materials"). If there is an inconsistency between this document and the Offering Materials for the BlueBay Fund, the provisions in the Offering Materials shall prevail. You should read the Offering Materials carefully before investing in any BlueBay fund. Past performance is not indicative of future results. The investments discussed may fluctuate in value and investors may not get back the amount invested. An investor's actual performance and fees may differ from the performance information shown due to capital contributions, redemptions or withdrawals. All investments involve risk including the loss of principal and there is no guarantee that the fund investment objectives will be achieved. You should read the prospectus carefully before investing in any BlueBay fund.

While gross of fee figures would reflect the reinvestment of all dividends and earnings, it would not reflect the deduction of investment management and performance fees. An investor's return will be reduced by the deduction of applicable fees which will vary with the rate of return on the fund. For example, if there was an annualised return of 10% over a 5-year period then the compounding effect of a 0.60% management fee and a 0.20% performance fee would reduce the annualised return to 9.32% (figures used are only to demonstrate the effect of charges and are not an indicator of future performance). In addition, the typical fees and expenses charged to a fund will offset the fund's trading profits. A description of the specific fee structure for each BlueBay strategy is contained in the fund's prospectus. Net performance figures reflect the reinvestment of all dividends and earnings, and the deduction of investment management and performance fees. In addition, the typical fees and expenses charged to a fund will offset the fund's trading profits. The specific fee structure is detailed in the fund's offering materials and/or prospectus.

Any indices shown are presented only to allow for comparison of the BlueBay fund's performance to that of certain widely recognised indices. The volatility of the indices may be materially different from the individual performance attained by a specific fund or investor. In addition, the BlueBay fund holdings may differ significantly from the securities that comprise the indices shown. Investors cannot invest directly in an index.
